# BUNDLE OVERVIEW

Thank you for purchasing this bundle. I hope that everything helps you achieve your freelancing goals. This is just a brief summary of the bundle overview to help you get started and to have some structure.

**Order** – I'd recommend going through everything in the number order provided starting from number 1.

**eBook** – I'd suggest reading the whole eBook in one go just to get an overall idea of some of the strategies to follow and then read it a second time to really apply it.

**HTML Themes** – the themes I've provided are the themes I've used for clients and personal projects to help you save time and to create conversion-centred websites. Some are just examples (like 'dentist').

Please don't obsess about small coding issues if you are a pro ☺ I'm not a 'pro' at coding, but I am good at creating websites and generating income from it which is what really counts at the end of the day.

These themes are not for commercial resale use, so please don't use it other than for personal and client projects.

The images are for illustration purposes. You can download them for free from Pexels.com or download premium images from DepositPhotos.com.

For icons, you can download it from TheNounProject.com, but I would recommend upgrading to their premium plan so you can use icons without attribution.

Some pages/themes use PHP. Don't let this scare you. ALL you need to change is the email addresses. If you don't know how to view a preview of the site, you can go to:  https://www.wikihow.com/Open-a-PHP-File

**Facebook Group -** Please join the closed community of web designers/frontend developers aspiring to be better freelancers:

https://www.facebook.com/groups/freelancewebdesignersgroup/

The code you'll need to use is: **TFW7**  -  you'll be approved within 48 hours.

**Slack Group -** Please email me: course@studywebdevelopment.com with your email address if you'd like to join the Slack Group. I'll then send you an invite to join.

As always, feel free to email me and I'll be glad to help ☺
